

Prompt for Control Flow Graph Construction

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{  
  "function_name": "",  
  "is_encryption_function": true/false,  
  "description": "Elaborate your reason here."  
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:

...

Library function name: $\{f_{db}.nm\}$

Library function body: $\{f_{db}.S\}$

...

- If you are ready, please reply 'Understood'.

...

Function name: $\{f_{bf}.nm\}$

Function body: $\{f_{bf}.S\}$

...

Prompt for Source-Sink Labeling

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{
  "function_name": "",
  "is_encryption_function": true/false,
  "description": "Elaborate your reason here."
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:
...

Library function name: {f_{db}.nm}

Library function body: {f_{db}.S}

...

- If you are ready, please reply 'Understood'.

...

Function name: {f_{bf}.nm}

Function body: {f_{bf}.S}

...

Prompt for Graph Traversing

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{
  "function_name": "",
  "is_encryption_function": true/false,
  "description": "Elaborate your reason here."
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:

Library function name: $\{f_{db}.nm\}$
Library function body: $\{f_{db}.S\}$
...

- If you are ready, please reply 'Understood'.

Function name: $\{f_{bf}.nm\}$
Function body: $\{f_{bf}.S\}$
...

Prompt for Incompatibility Analysis

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{  
  "function_name": "",  
  "is_encryption_function": true/false,  
  "description": " Elaborate your reason here."  
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:
...

```
Library function name: {fdb.nm}  
Library function body: {fdb.S}  
...
```

- If you are ready, please reply 'Understood'.
...

```
Function name: {fbf.nm}  
Function body: {fbf.S}  
...
```

Prompt for Test Case Generator

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{
  "function_name": "",
  "is_encryption_function": true/false,
  "description": "Elaborate your reason here."
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:

...

Library function name: {f_{db}.nm}

Library function body: {f_{db}.S}

...

- If you are ready, please reply 'Understood'.

...

Function name: {f_{bf}.nm}

Function body: {f_{bf}.S}

...

Prompt for Step-by-Step Simulator

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{  
  "function_name": "",  
  "is_encryption_function": true/false,  
  "description": " Elaborate your reason here."  
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:

...

Library function name: {f_{db}.nm}

Library function body: {f_{db}.S}

...

- If you are ready, please reply 'Understood'.

...

Function name: {f_{bf}.nm}

Function body: {f_{bf}.S}

...

Prompt for Simulated Result Analyzer

System:

You are now a code analyst and reverse engineering expert, with in-depth knowledge of various encryption algorithms and the underlying principles of ransomware.

Task:

Your task is to determine whether the given code implements an encryption function.

Rules and conditions:

- If the code does not meet the criteria, set "is_encryption_function" to false.
- The output should be structured in JSON format:

```
{  
  "function_name": "",  
  "is_encryption_function": true/false,  
  "description": "Elaborate your reason here."  
}
```

- Hash functions and other irreversible algorithms are not considered as encryption algorithms.
- Below is an example of an encryption function from a cryptographic library:

...

Library function name: $\{f_{db}.nm\}$

Library function body: $\{f_{db}.S\}$

...

- If you are ready, please reply 'Understood'.

...

Function name: $\{f_{bf}.nm\}$

Function body: $\{f_{bf}.S\}$

...
