

```
1 class Base {
2 public:
3     virtual void print() { /* ... */ }
4 };
5
6 class Derived : public Base {
7 public:
8     void print() override { /* ... */ }
9     void specificMethod() { /* ... */ }
10 };
11
12 void example_type8() {
13     void* rawPtr = new Derived();
14     static_cast<Derived*>(rawPtr)->specificMethod(); // Compiles, but runtime error if rawPtr
15 does not actually point to a Derived object
16     rawPtr->print(); // Compilation error: 'void*' is not a pointer-to-object type, cannot
17 dereference
18
19     Base* basePtr = new Base();
20     Derived* derivedPtr = static_cast<Derived*>(basePtr); // Compiles, but runtime error if
21 basePtr does not actually point to a Derived object
22     derivedPtr->specificMethod(); // Runtime error: attempting to call a non-existent method (if
23 the object is not Derived)
24
25     delete rawPtr; // Free memory
26     delete basePtr;
27 }
```
