

```
1 class DataProcessor {  
2     public:  
3         void processData(int input) {  
4             // TODO: Add actual processing logic here  
5             // This is a placeholder, actual logic is missing.  
6             int result = input * 2;  
7         }  
8     };
```
