

```
1 class Config {
2 public:
3     const int value; // Const members must be initialized in the constructor's member initializer
4 list
5     int& ref;        // Reference members must be initialized in the constructor's member
6 initializer list
7
8     Config() {} // Compilation error: 'value' and 'ref' must be initialized in constructor
9 base/member initializer list
10 }
11 };
12
13 void example_type6() {
14     int data = 10;
15     Config c; // If there is no constructor with parameters above, and the default constructor
16 does not initialize const/reference, it will cause an error.
17
18     int uninitialized_var;
19     int result = uninitialized_var + 5; // Runtime error: using uninitialized variable, undefined
20 behavior
21 }
```
